

Neodymium magnetic grids MG are successfully used in the processing of plastics, ceramics and other industries where ferromagnetic separation of bulk materials and liquids is needed. The method of execution allows quick and trouble-free cleaning.

MG 150 Magnet

length: 150 mm

width: 150 mm

height: 40 mm

shaft diameter: 25 mm

magnetic induction on the surface of the roller: approximately 0,95 T (9500 Gs)

MG 200 Magnet

length: 200 mm

width: 200 mm

height: 40 mm

shaft diameter: 25 mm

magnetic induction on the surface of the roller: approximately 0,95 T (9500 Gs)

MG 250 Magnet

length: 250 mm

width: 250 mm

height: 40 mm

shaft diameter: 25 mm

magnetic induction on the surface of the roller: approximately 0,95 T (9500 Gs)

Caution, careless handling can cause injuries to your hands!
